RV-150

Helicoidal Impeller Pump

inose.

I Application

The RV -150 pump is a sanitary helicoidal impeller pump with the capacity of up to 270 m³/h. Apart from the standard design, self-priming option is also available, it allows negative suction of liquids with suspended solid particles.

It can be used in the canning industry for the transfer of solids in suspension in water (corn, peas, mushrooms, pieces or whole fruits, etc.), it can also be used in the olive industry to pump olives in brine, etc.

Solid particles suspended in liquid are pumped without being damaged.

I Operating principle

The operating principle of the helicoidal impeller pump borrows its characteristics from the mixed flow centrifugal pumps. The impeller has only one vane, it is housed inside the pump casing and rotates in conjunction with the shaft, conveying the kinetic and pressure energy to the liquid. Then, in the volute of the casing the transformation of this energy results in the form of pressure.

I Design and features

2-piece casing with volute, manufactured from 8 mm cold formed plate.

Flange connections DIN 2633.

Mechanically balanced helicoidal impeller of double curvature with a single vane.

Sanitary mechanical seal.

Close-coupled pump.

Motor: IEC B35 IP55, F- class insulation.

Bearing support in the lantern.

Maximum diameter of a solid particle Ø 60.

3A certified pump.

I Materials

Parts in contact with the product AISI 316L
Bearing support GG-25
Other st.st. parts AISI 304

Gaskets EPDM according to FDA 177.2600

Mechanical seal SiC/C/EPDM Internal surface finish $Ra ≤ 0.8 \mu m$ External surface finish satin

I Options

SiC/SiC mechanical seal for abrasive products Gaskets: FPM or PTFE. Other connection types: DIN, Clamp, etc. Motors with other protections.
