Waukesha Cherry-Burrell is proud to offer the paper industry our complete line of durable Rotary Pumps. The unique design and rugged construction of Waukesha pumps are ideal for applications requiring a highly reliable, low maintenance unit that can be counted on to do its job from day one... and every day after.

Key Advantages of the Waukesha Rotary Pump in Paper Mill Applications

- ▶ Ideal pump for hot cooked starch
- ▶ Pumps filled with settled slurries will start without damaging pump or seals
- ▶ Pump with water flushed seals can run dry indefinitely
- ▶ Low shear pump will not harm sensitive materials
- ▶ Smooth pulsation free flow
- ▶ No internal rotor contact
- ▶ Shaft timing less critical than lobe pump design
- ▶ Bearing Isolators available

Typically requires less horsepower than Progressing Cavity

ADVANTAGES TO EVERYONE

Chemical suppliers and Paper mills

both benefit when you specify Waukesha Rotary Pumps for your mill trials. You worked hard for the opportunity to demonstrate the competitive advantages of your product. Why put the outcome of the trial at risk using less than the best equipment? With Waukesha, you eliminate pump performance as a variable in your trial.

Mill Personnel

benefit from Waukesha's rugged design, ease of maintenance and high degree of reliability. Don't run the risk of a machine shut down due to failure of a chemical feed. Avoid the high maintenance costs associated with pump rebuilds. Let Waukesha keep you up and running-- trouble free!

APPLICATIONS & ADVANTAGES

Low Shear

Ideal in handling sensitive materials such as made-down polymer, starch slurries, emulsion, cooked starch, fillers and coatings.

Smooth, Pulsation-Less Flow

The unique arc-shaped rotor wing creates a long sealing path, resulting in reduced slip and smooth flow characteristics.

Rugged Construction

All units are constructed of 316 stainless steel with non-galling alloy 88 steel rotors to ensure long service life. With water flushed seals, the pump can be run dry indefinitely; an operation that would tear apart a progressing cavity pump. Pumps are available with NPT or flanges.

Ease of Maintenance

Servicing a Waukesha pump is a snap. The rotors can be inspected by removal of the faceplate; inspection of the seals require the simple removal of the pump casing. Simple maintenance, rugged design and construction are a few of the reasons that Waukesha pumps have been known to operate for 50 years and still run strong.
