THIS IS WHAT OUR CURVES, TABLES AND CHARTS SHOW YOU.

B pumps

The curves are the specified performance for the impeller selected.

The values shown are for a BS 2125 pump.
Impeller characteristics are coded as follows:

LT=Low head. MT=Medium head. HT=High head.
SH=Super High head.

□ =optimal duty point.

Technical data	MT	HT
Impeller code	231	233
Phase	3~	3~
Speed of rotation	2875 rpm	2875 rpm
Output power	8 kW	8 kW
Input power	9,5 kW	9,5 kW
Weight	77 kg	80 kg

C, D, F, L, M, N and H pumps

The upper diagram shows the shaft power for the corresponding pump.

The lower diagram shows the performance data for each pump in terms of pressure (m) and flow rate (l/s).

Further data for each impeller is also shown in the table format.

□ =optimal duty point.

P_1 =motor input power
 P_2 =shaft power

Impeller code	No. of vanes	Outlet dia. mm CP-vers	Through-let, mm	Motor rating kW		rpm	Available versions
				P_1	P_2		
263	1	100	Ø 76	34	30	2930	CP/CT/CS
264	1	100	Ø 76	34	30	2930	CP/CT/CS
265	1	100	Ø 76	34	30	2930	CP/CT/CS

Large C pumps, P, PP and L pumps

This chart and table provides performance data for impellers used in a large C 3356 pump.

Each different impeller is coded for easy identification.

Impellers can be machined to achieve any duty point required within a field.

Impeller code	No. of vanes	Outlet dia. mm CP-vers	Through-let, mm	Motor rating kW		rpm	Available versions
				P_1	P_2		
610	3	350	Ø 102	82-150	75-140	990	CP/CT
810	3	350	Ø 102	61	55	735	CP/CT

B-PUMPS • 50 Hz

The B-pump has a multi-vaned, open or semi-open channel impeller available in different materials. It is specifically designed to handle media containing highly abrasive material, such as clay, sand, drilling mud, etc.

C-PUMPS • 50 Hz

SMALL AND MEDIUM SIZE

The conventional single-channel impeller is a shrouded channel impeller running in a volute. The shape and size of the channel minimize clogging, and therefore makes the pump ideal for waste water, containing large solid particles. See also chapter N-pumps.

C- AND R-PUMPS • 50 Hz

LARGE SIZE

The C-pumps are equipped with shrouded multi-channel impellers running in a volute. The shape and the size of the channel minimize clogging, and therefore make the pump ideal for waste water containing large solid particles.

D-PUMPS • 50 Hz

D-pumps are equipped with a vortex impeller in a volute. Pumping takes place by the impeller inducing a rapidly rotating vortex, with consequent pressure rise in the liquid. As a result, most of the solid particles in the liquid never come into contact with the impeller, thereby minimizing wear.

The throughlet area of a pump with a torque flow impeller is almost as large as the pump inlet.

F-PUMPS • 50 Hz

F-pumps have an open impeller in a volute. The impeller is S-shaped and is fitted with a cutter, to enable it to chop up straw and other long-fibrous material. This prevents clogging.

The inlet part of the impeller is screw shaped, which enables the feeding of manure when it is thickest and most difficult to move, into the pump. The cutting plate together with the impeller chop up long-fibrous material before it enters into the pump.

L-PUMPS • 50 Hz

The L-pump's impeller is a shrouded channel impeller in a volute with guide vanes. The guide-vane section leads the rotating water outward and upward on the outside of the pump. L-pumps are mainly used in sewage-treatment plants and in such applications as storm-water pumping, irrigation and drainage.

M-PUMPS • 50 Hz

The M-pump features an effective grinder assembly. Specially designed for pressure sewage systems. The vortex impeller is fitted with a cutting device at the inlet. All solids are reduced to particles no larger than 5 x 15 mm. The result is a fine slurry that can be pumped through pipes as narrow as 32 mm in diameter.

★ 2000- m³

* Open water surface area, ranging from 0 to 5000 m²
depending on mixer and conditions.

** **Partial (localized) mixing.**
Sizing dependent on slurry quality and pumping capacity.

Materials of construction

ITT Flygt offers a wide range of suitable materials of construction. In addition to the standard models in high quality, pressure-resistant cast iron, models are available also in acid- and corrosion-resistant stainless steel. Modular design allows the selective assembly of parts in various material combinations.

Note:

The above values are recommended only, based on empirical data. For detailed information contact your nearest FLYGT Sales Office. A mixer application specialist will analyze your data and, using the latest in computer software technology, will provide exact specifications, selection and layout most suitable and most economical for your particular application.

N-PUMPS • 50 Hz

SMALL AND MEDIUM SIZE

The state of the art impeller design for waste water. Excellent clog resistance is combined with high efficiency. The high efficiency is maintained over time due to the self cleaning design incorporating heavily back swept leading edges and a relief groove in the volute.

PROPELLER-PUMPS • 50 Hz

The propeller is dynamically balanced for minimum vibration and maximum life of seals and bearings. Its new, hydrodynamic, conical design affords more efficient pumping. Moreover, the propeller's swept-back blades (for low-clogging performance) are numerically machined to match the pump's specified duty point.

EXPLOSION PROOF PUMPS AND MIXERS

Many of the Flygt pumps are available in Explosion-Proof execution and various approvals apply. Below is given the classification of the different approvals in accordance with the European norms and the explanation of the letter coding.

E EXd e IIB T4* II G2
E EXd e IIB T3* II G2
E EXd e I* I M2

E = European norm EN 50014

EXd = Explosionproof encapsulation permitted in Zone 1 and 2. EN 50018.

e = Increased safety. EN 50019.

I = Gas group (Methane), coal mines

IIB = Gas group (Ethylene), industry

T4 = Temp. class. Max. surf.temp. = 135° C.

T3 = Temp. class. Max. surf. temp. = 200° C.

Approval No. The thermocontacts in the equipment must be connected.

II G2 and I M2 = Equipment groups and categories acc. to EC-Directive 94/9/EC.

Classification of hazardous areas

Hazardous locations are those in which flammable materials are likely to be present or introduced in concentrations, which can be ignited through normal or abnormal equipment operation. Equipment must generally be approved for these locations. Hazardous areas are classified into zones according to the IEC 79-10. Most of the European countries have standards or norms which conform with this recommendation.

Due to the temporary and local probability of the presence of an explosive atmosphere, the hazardous areas are divided into zones as follows:

- Zone 0:** Area in which an explosive atmosphere is continuously present for long periods.
- Zone 1:** Areas in which an explosive atmosphere is likely to occur in normal operation.
- Zone 2:** Areas in which an explosive atmosphere is not likely to occur in normal operation and, if it occurs, it will only exist for a short time.

Flygt guarantees the pumps to be in compliance with the above mentioned approvals when being delivered.

It is the responsibility of the owner to make sure that the equipment is used in accordance with the approval and in applications for which it is intended. Special attention should be paid to the connection of safety devices such as thermocontacts and the earthing systems.

All modification and repair work must be performed in accordance with the original approval and by using only genuine Flygt parts.

The degree of protection for all Flygt designed and constructed submersible equipment is IP68, 20m.

The following pump-types and mixers are available in EX-proof execution:		
3000-pumps	2000-pumps	Mixers
