X Series

General characteristics

- AISI 316 stainless steel lifting and carrying handle.
- CF-8M steel construction which makes the pump suitable for use in saline environments.
- Oil-bath motor with thermal protections.
- Shielded ball bearings with lifetime autolubrication
- Two mechanical seals in silicon carbide (2SiC).
- Wide free passage allowing the expulsion of solids and preventing fouling of the impeller (DGO)
- Intake strainer in stainless steel (DRO)

Hydraulic families

DG (Draga)

page 7

- Vortex impeller in CF-8M steel.
- Ideal for lifting strongly corrosive or aggressive strained liquids, especially in the chemical industry. Intended for specific industrial applications.

DR (Dreno)

page 15

- Multichannel open impeller in CF-8M steel.
- Designed for the treatment of strongly corrosive or chemically aggressive liquids, especially in the chemical industry, this unit is for a specific industrial application.

Versions available

• Electrical variants

Single-phase models

- T Thermal protection
- TCST Thermal protection, capacitor, electrical cabinet, overload protection
- TCSGT Thermal protection, capacitor, float switch, electrical cabinet, overload protection

Three-phase models

- NAE No electric accessories installed

• Cooling system

- N No cooling and/or seal flushing system

• Set of mechanical seals

- 2SiC Two mechanical seals in silicon carbide (2SiC).

Installations

Free installation

The electric pump, standing on its feet or base, is connected to the delivery flexible pipe using a joint fixed to the discharge.

This installation allows to move easily the electrical pump

Fixed installation

The electric pump, standing on its feet or base, is connected to the delivery pipe, which is screwed to the discharge if threaded, or fixed to a bend if the port is flanged. The pump-hose connection may be threaded or flanged, depending on the pump fitting.

Installation with base coupling foot

For submerged installation, available for electric pumps with flanged or threaded horizontal discharge. The coupling device is fixed to the bottom of the tank and the pump is lowered in with the aid of two guide pipes fitted earlier, until the connection to the foot is completed. The delivery pipe is fixed to the coupling device discharge.

This device makes routine checks, any maintenance work or replacement of the pump extremely easy, with no need to empty the tank.

Pumps with vortex impeller

Operating ranges

Range characteristics

Motor power	0.37 ÷ 1.5 kW
Poles	2 / 4
Insulation class	F
Degree of protection	IP68
Discharge	GAS 2" vertical DN65 - DN80 horizontal
Free passage	max 60 mm
Max flow rate	18.4 l/s (1104 l/min)
Max head	14.9 m

Motor

Oil bath motor with thermal protections.

Cable

H07RN-F 4G1 - 5 m cable length. Optional 10 m cable length.

Mechanical seals

Two silicon carbide mechanical seals (2SiC)

Applications

Ideal for lifting strongly corrosive or aggressive strained liquids, especially in the chemical industry. Intended for specific industrial applications.

B Series

General characteristics

- AISI 316 stainless steel lifting and carrying handle.
- B10 bronze construction which makes the pump suitable for use with chemically aggressive liquids.
- Oil-bath motor with thermal protections.
- Shielded ball bearings with lifetime autolubrication
- Two mechanical seals in silicon carbide (2SiC).
- Wide free passage allowing the expulsion of solids and preventing fouling of the impeller (DGB)
- Intake strainer in stainless steel (DRB)

Hydraulic families

DG (Draga)

page 22

- Vortex impeller in B10 bronze.
- Suitable for lifting chemically aggressive soiled liquids, dyes and seawater. These units are therefore ideal for applications in the tanning industry, the paper industry and the shipping sector.

DR (Dreno)

page 25

- Multichannel open impeller in B10 bronze.
- Suitable for treating chemically aggressive strained liquids, dyes and seawater. Can be used for applications in the tanning industry and the shipping sector.

Operating ranges

DGB

DRB

Versions available

• Electrical variants

Single-phase models

- T Thermal protection
- TCST Thermal protection, capacitor, electrical cabinet, overload protection
- TCSGT Thermal protection, capacitor, float switch, electrical cabinet, overload protection

Three-phase models

- NAE No electric accessories installed

• Cooling system

- N No cooling and/or seal flushing system

• Set of mechanical seals

- 2SiC Two mechanical seals in silicon carbide (2SiC).

Installations

Free installation

The electric pump, standing on its feet or base, is connected to the delivery flexible pipe using a joint fixed to the discharge.

This installation allows to move easily the electrical pump

Fixed installation

The electric pump, standing on its feet or base, is connected to the delivery pipe, which is screwed to the discharge if threaded, or fixed to a bend if the port is flanged. The pump-hose connection may be threaded or flanged, depending on the pump fitting.

Installation with base coupling foot

For submerged installation, available for electric pumps with flanged or threaded horizontal discharge. The coupling device is fixed to the bottom of the tank and the pump is lowered in with the aid of two guide pipes fitted earlier, until the connection to the foot is completed. The delivery pipe is fixed to the coupling device discharge.

This device makes routine checks, any maintenance work or replacement of the pump extremely easy, with no need to empty the tank.

DGB

Pumps with vortex impeller

Operating ranges

Range characteristics

Motor power	0.37 ÷ 1.5 kW
Poles	2
Insulation class	F
Degree of protection	IP68
Discharge	GAS 2" vertical
Free passage	max 38 mm
Max flow rate	10.6 l/s (636 l/min)
Max head	15 m

Motor

Oil bath motor with thermal protections.

Cable

H07RN-F 4G1 - 5 m cable length. Optional 10 m cable length.

Mechanical seals

Two silicon carbide mechanical seals (2SiC)

Applications

Suitable for lifting chemically aggressive soiled liquids, dyes and seawater. These units are therefore ideal for applications in the tanning industry, the paper industry and the shipping sector.

Installations

Versions

Electrical variants	T, TCST, TCSGT (single-phase models) NAE (three-phase models)
Cooling system	N
Mechanical seals	2SiC

Operating specifications

Max operating temperature	40 °C
PH of treated fluid	5 ÷ 11
Viscosity of treated fluid	1 mm²/s
Maximum immersion depth	20 m
Density of treated fluid	1 Kg/dm³
Acoustic pressure max	<70dB
Max starts per hour	30

Y Series

General characteristics

- CF-8M steel construction which makes the pump suitable for use in saline environments.
- A rigid or flexible duct can be fixed to the cable gland to protect the power supply cable.
- Oil-bath motor with thermal protections.
- Shielded ball bearings with lifetime autolubrication
- Two mechanical seals in silicon carbide (2SiC) and one mechanical seal in alumina graphite (AL) for maximum reliability even in heavy-duty applications.
- Large oil sump to guarantee longer mechanical seal lifetime.
- Multichannel open impeller in CF-8M steel.
- Wide free passage allowing the expulsion of solids and preventing fouling of the impeller.

Hydraulic families

DR (Dreno)

page 32

- Multichannel open impeller in CF-8M steel.
- Designed for the treatment of strongly corrosive or chemically aggressive liquids, especially in the chemical industry, this unit is for a specific industrial application.
- Suitable for treating medium-low density fluids, containing solid and fibrous parts, sand and activated sludges.

Installations

Free installation

The electric pump, standing on its feet or base, is connected to the delivery flexible pipe using a joint fixed to the discharge.

This installation allows to move easily the electrical pump

Fixed installation

The electric pump, standing on its feet or base, is connected to the delivery pipe, which is screwed to the discharge if threaded, or fixed to a bend if the port is flanged. The pump-hose connection may be threaded or flanged, depending on the pump fitting.

Installation with base coupling foot

For submerged installation, available for electric pumps with flanged or threaded horizontal discharge. The coupling device is fixed to the bottom of the tank and the pump is lowered in with the aid of two guide pipes fitted earlier, until the connection to the foot is completed. The delivery pipe is fixed to the coupling device discharge.

This device makes routine checks, any maintenance work or replacement of the pump extremely easy, with no need to empty the tank.
